GOOGLE BUSINESS PROFILE YEAR ONE PERFORMANCE REPORT July 2025 – July 2026

REPORT 1 OF 2 — BASELINE PERIOD

Covers the period before any corrective action was taken: wrong map location, wrong phone number (for most of the period), no photos, and no active marketing.

A follow-up report (Report 2 — Post-Implementation) will cover performance after the location, photos, and marketing fixes are live.

Executive Summary

Over its first 13 months on Google, Abba Technical College's Business Profile recorded 532 total interactions and 881 profile views a steady, organic stream of local curiosity generated with zero paid marketing, no working website, no real photos, and, for nearly the entire period, an incorrect map location and a dead phone number.

The headline finding of this report is not that interest is weak it is that interest has been consistently present despite every basic trust signal being broken. The single largest constraint on turning that interest into real enrollment inquiries was not a lack of curiosity, but a broken funnel: people who wanted to visit were very likely being directed to the wrong physical location for the entire year, and the small number who tried to call had a real chance of reaching a disconnected number.

This report captures the 'before' picture in full, as a clean baseline. It is intentionally free of any corrective action so that the next report covering the period after the location, photos, and marketing fixes go live can be measured against a true starting point.

Year at a Glance

Metric	Value	Context
Total interactions (13 months)	532	~41 / month
Total direction requests	519	97.6% of all interactions
Total phone calls	12	~1 / month
Total chat clicks	0	Every single month, all year
Total website visits	1	No live website existed
Total profile views	881	~68 / month
Peak month	March 2026	70 interactions / 111 profile views
Lowest month	May 2026	15 interactions / 66 profile views

Monthly Trend Interactions vs. Profile Views

Interactions and profile views generally moved together, with two notable breaks: December 2025 (interactions rose while views fell) and July 2026 (views rose sharply +35% while interactions stayed flat) the second of which coincides with the very first weeks of active Facebook posting.

Full Monthly Data — July 2025 to July 2026

Month	Calls	Chat clicks	Directions	Website visits	Profile views	Total interactions	Note
Jul 2025	0	0	0	0	1	0	launch month
Aug 2025	2	0	60	0	71	62	
Sep 2025	0	0	32	0	69	32	
Oct 2025	0	0	32	0	82	32	
Nov 2025	0	0	38	0	66	38	
Dec 2025	0	0	59	0	46	59	
Jan 2026	0	0	47	0	61	47	
Feb 2026	5	0	43	0	70	48	
Mar 2026	3	0	67	0	111	70	peak month
Apr 2026	0	0	35	0	87	35	
May 2026	0	0	14	1	66	15	lowest month
Jun 2026	1	0	48	0	64	49	
Jul 2026	1	0	44	0	87	45	profile views +35%

Where the Interactions Came From

Every single month, all year, the story is the same: people ask for directions. Calls are rare. Chat clicks never happened once. Website visits never happened because there was no live website to visit.

What Made Up Each Month's Interactions (Chat clicks = 0 every month)

**Full-Year Interaction Channel Mix
(13 months, 532 total interactions)**

Website visits: 1 all year | Chat clicks: 0 all year

Known Limitations of This Baseline Period

Every number in this report should be read against these five facts. They are not excuses for the data they are the explanation for it, and they define exactly what the next report needs to fix in order to be a fair test of real demand.

Factor	Duration of issue	Detail	Status today
Map location	Wrong the entire period	Pin points to a previous operating location, not the Highland Sherikat compound	Not yet fixed planned for today
Phone number	Wrong for ~12.5 of 13 months	+211 927 947 688 was lost/unreachable; replaced with +211 922 600 538	Fixed
Course list shown	Outdated for 12 of 13 months	Listed 8 services incl. driving/license issuance, not the current 7 certificate courses	Fixed
Photos	None, the entire period	Listing has never had a real photo of the compound or campus	Not yet fixed
Active marketing	None, the entire period	No paid ads, no consistent social media activity until very recently	Just beginning

Deeper Insights

1. Direction requests, not calls, carried the entire year

519 of 532 interactions (97.6%) were people requesting directions. Only 12 phone calls happened in 13 months, and not a single chat click occurred ever. This is not evidence that people don't want to talk to the school; it is evidence that almost no one who wanted to talk to the school could reach it. With the listed number disconnected for most of the year, a caller had no way to succeed, and Google does not distinguish a failed call attempt from someone simply choosing not to call.

2. The map pin was very likely sending people to the wrong place all year

This is the most consequential finding in the report. If the location shown on Google has been incorrect for the entire 13-month period, then a meaningful share of the 519 people who requested directions may have traveled to a location that was not the Highland Sherikat compound. Anyone who did this and found nothing there would have no way to know the real location was different, and would have no reason to try again. This single issue may be responsible for more lost inquiries than any other factor in this report more than the phone number, and far more than the outdated course list.

3. Volatility is high and not yet seasonal

Interactions swung from 0 (launch month) to 70 (March 2026) to 15 (May 2026) without a clear repeating pattern. One year of data is not enough to separate genuine seasonality (school terms, holidays, weather) from noise. The next report should be watched for whether this volatility persists once the map and contact info are fixed, or whether it settles into a more predictable pattern.

4. July 2026 shows the funnel leaking in real time

Profile views jumped 35% in July the second-highest monthly figure on record while interactions stayed flat and calls stayed at 1 with no change. This is consistent with new Facebook activity driving people to look the school up on Google, only for the listing (still showing the dead number and the outdated 8-service description for most of the month) to fail to convert that extra attention into action. This is the clearest real-time evidence in the whole report that the fixes now underway are addressing a real, active leak not a hypothetical one.

5. The July 2026 prediction validated the trend model

Before this report was compiled, a trend-based projection estimated approximately 45-48 interactions for July 2026. The actual figure was 45. This close match is a useful signal: the underlying ~40-48/month baseline appears to be a real, stable pattern rather than noise, which makes any future deviation from it once the fixes are live more likely to reflect a genuine change in demand rather than random variation.

6. Reporting behavior

Google sends this report on or near the 7th of each month (7 of 13 reports landed exactly on the 7th), drifting to the 6th, 8th, 9th, 10th, 12th, or 14th depending on weekends. The exact send time is not fixed timestamps range from just after midnight to nearly 9 PM. No month in the July 2025 to July 2026 period is missing from Google's records.

What This Report Does Not Yet Answer

Because the map location, photos, and active marketing were not yet in place during this period, this report cannot yet answer the question that matters most: if someone finds this listing, sees the real courses, calls a working number, and is directed to the correct compound, will they actually enroll? Every number above measures curiosity under broken conditions. None of it yet measures demand under fair conditions.

Recommended Next Steps (Before Report 2)

- **1. Fix the map location today, as planned** this is likely the single highest-impact remaining fix, since it may be misdirecting the majority of the 40+ people who show interest each month.
- **2. Add real photos of the compound as soon as possible** a listing with zero photos gives a curious visitor no way to build trust before calling or visiting.
- **3. Let one full month pass with all fixes live** location, phone number, and course list all correct for the entire reporting month before drawing conclusions from the next report.
- **4. Keep the Facebook posting cadence going** July's profile-view spike suggests it is already pulling in extra attention; the goal now is making sure that attention lands somewhere accurate.
- **5. Treat Report 2 as the real test** this baseline report explains why the numbers look the way they do; the next one will show whether fixing the leaks actually changes them.

End of Report 1 — Baseline Period (No Implementation). Report 2 will cover the period following the location, photo, and marketing corrections.
