

ABBA TECHNICAL COLLEGE (ATC)

Master Business Plan

Motto: Your Path to Self-Reliance **Headquarters:** Highland Sherikat, Juba, South Sudan

Institution Type: Technical & Vocational Education and Training (TVET) Institution

Planning Horizon: 2026 – 2031

CHAPTER 1: STRATEGIC FOUNDATION

1.0 Institutional Identity

- **Name:** Abba Technical College (ATC)
- **Motto:** Your Path to Self-Reliance
- **Headquarters:** Highland Sherikat, Juba, South Sudan
- **Institution Type:** Technical & Vocational Education and Training (TVET) Institution

1.1 Mission Statement

Abba Technical College exists to transform young people into self-reliant, skilled professionals through intensive, practice-based technical training that leads to immediate income generation and sustainable economic independence.

1.2 Vision Statement

To become a leading technical and vocational training institution in South Sudan that produces highly skilled, self-reliant graduates capable of solving real-world problems and driving local economic development.

1.3 Core Values

Abba Technical College is built on five core values:

1. **Self-Reliance** — Every graduate must be capable of generating income independently through practical skills.
2. **Practical Excellence** — Training is focused on real-world competence, not theory alone.
3. **Discipline** — Professional behavior, respect for tools, time, and learning environments.
4. **Integrity** — Honest workmanship, trust in service delivery, and accountability in training.

5. **Entrepreneurship** — Graduates are encouraged to create work opportunities, not wait for employment.

1.4 Institutional Philosophy

Abba Technical College is founded on the belief that practical skills are more immediately valuable than long theoretical education in environments of high unemployment and economic pressure. The institution prioritizes short-cycle, high-impact training models that enable learners to transition into income-generating activities within a short timeframe.

1.5 Problem Statement

The education system in South Sudan faces critical challenges:

- High cost of long-term university education (4–6 years)
- Limited practical training opportunities in traditional institutions
- Graduates entering the job market without employable skills
- High youth unemployment and economic dependency
- Increasing risk of poverty, frustration, and informal survival activities

This creates a structural gap between education and employment.

1.6 Market Gap

There is strong demand for:

- Fast, affordable skill-based training
- Practical technical education tied to real market needs
- Low-cost alternatives to university education
- Immediate income-generating skill acquisition

However, existing institutions often emphasize theory over practice and fail to produce job-ready graduates.

1.7 Institutional Solution Model

Abba Technical College addresses this gap through a 6-Month Self-Reliance Pipeline, designed to convert learners into skilled, income-ready individuals.

Key Features:

- Intensive 6-month training cycle
- Heavy practical-based learning model
- Real equipment and damaged tools for practice

- Controlled student intake (3–5 students per class)
- Strong supervision and structured mentorship
- Industry attachment phase after training

1.8 Ideal Student & Sponsor Profile

- **The Learner:** Motivated individuals aged 18 to 40 seeking practical, immediately monetizable skills, committed to personal self-reliance.
- **The Sponsor:** In most cases, tuition is paid not by the learner but by a parent, older sibling, spouse, or community supporter investing in that person's future. Abba Technical College is positioned as a faster, lower-cost path to the same outcome every sponsor wants — a self-sufficient loved one — at a fraction of the time and cost of a 4-year degree.

1.9 Training Philosophy

Training at Abba Technical College is based on:

- "Learning by doing"
- Real-life equipment exposure from the beginning
- Structured progression from basics to real repairs
- Use of damaged or non-functional equipment for practice
- Industry attachment after foundational competence is achieved

1.10 Economic Impact Model

The institution is designed to:

- Convert financial dependents into income earners
- Reduce household economic pressure
- Enable graduates to support siblings and families
- Reduce youth unemployment and vulnerability
- Build local technical capacity in critical sectors

The program is designed to position graduates for financial independence within 12–24 months of completion, depending on individual effort, market demand, and local economic conditions.

1.11 Strategic Positioning

Abba Technical College positions itself as:

- A broad-access institution open to any motivated individual aged 18–40, delivered through a deliberately small-cohort training model that protects quality and gives sponsors confidence their investment produces real competence — not crowded, under-resourced instruction.
- A practical skills development institution
- A short-cycle technical training provider
- A bridge between unemployment and self-employment
- A decentralized, industry-linked training model

1.12 Future Growth Intention (Foundation Level)

While the current focus is technical and vocational training, the institution is designed for long-term expansion into additional disciplines such as science, engineering, and applied technologies, without changing its core values or mission.

1.13 Founder & Leadership

The founder's entrepreneurial path began with Nile Electronics Supply and Repair, a hands-on computer and mobile phone repair venture based in Sherikat. Operating directly as the technician, the founder built early credibility through real repair work and cryptocurrency transaction services before relocating to a dedicated commercial space in Hai Thura.

While running the repair business, the founder identified strong organic demand for technical skills training and launched the first iteration of Abba Technical College alongside it, offering a broad catalog including computer literacy, phone and computer repair, hairdressing, and Raksha and motorcycle mechanics.

That first attempt did not survive contact with the market — and the founder studied exactly why. Unrestricted credit ("pay later") on both repair jobs and tuition drained cash flow to zero. Marketing was passive, limited to banners and a repair-focused TikTok account. Heavy-machinery courses ran without formal policies, and the sole training partnership was a verbal agreement with no contract. Rising transport and living costs from operating outside Sherikat consumed what little margin remained. The business closed.

Rather than abandon the vision, the founder rebuilt it from the ground up. ATC now operates rent-free from the founder's own family compound in Sherikat, eliminating the single largest cost that sank the first attempt. Tuition and service fees are collected upfront with no exceptions. The curriculum has been narrowed to seven high-yield tracks, dropping hairdressing and adding Data Analytics. Training is now the primary business, with repair work treated as a secondary, founder-controlled task rather than a competing storefront. Partnerships will be formalized in writing before any student is placed.

Marketing has shifted to a deliberate, multi-channel digital strategy built on real evidence of the school's work, not improvised signage.

ATC's founder is, in this sense, the institution's first proof of concept: someone who tested self-reliance under real failure, diagnosed the causes with discipline rather than excuses, and rebuilt a stronger, leaner model — the same transformation the institution now exists to produce in its students.

✦ Chapter 1 Summary

Abba Technical College is a skills-to-income institution, tested and refined through real-world experience, built to solve the gap between education and employment in South Sudan through intensive, practical, and affordable technical training — led by a founder who has personally lived the failure-to-resilience journey the institution now teaches.

End of Chapter 1. Next: Chapter 2 — Market Analysis & Competitive Positioning.
